

ONE-CHANNEL PANEL PEN RECORDER **KR7 TYPE**

- One measuring channel, continuous recording
- Printing of text descriptions on the recording tape
- Recording of voltage, current, temperature or resistance
- Programmable measurement and recording parameters
- □ Roll and Z-fold chart paper tape
- IP65 front panel protection degree
- □ Supply: 90...<u>230</u>...253 V a.c. or 18...<u>24</u>...30 V c.d.

APPLICATION

The KR7 one-channel pen recorder with a built-in printer is intended for the continuous recording of voltage, current, temperature, resistance or other quantities converted into an electric signal on a paper tape.

Measurement, recording and printing parameters are directly programmed from the recorder keyboard or from PC through the RS-485 interface.

RECORDER FUNCTIONS

- continuous recording of the measured quantities on roll or Z-fold paper tape,
- printing of date, time, value of measured signal, tape feed speed, recorder parameter settings, description of binary signals and alarms.
- □ signalling of alarm state overruns by means of relay contacts and LED diodes on the analog scale,
- □ signalling of the sensor break,
- □ retransmission signal galvanically isolated from the recorder system,
- Icking of the parameter change by means of a password.

RECORDER PROPERTIES

- □ all recorder functions are controlled by a microprocessor-based system,
- linearization of sensor characteristics,
- □ parameters programming from the recorder keyboard with an LCD display and from a PC through the RS-485 interface connector with MODBUS protocol, following parameters are programmed:
 - measuring parameters (selection of sensors, measuring ranges, TC compensation, conduits resistance for RTD),
 - parameters of alarms (value of MIN/MAX alarm states, hysteresis, activity),
 - recording tape feed speed,
 - the range of descriptions on the recording tape,
 - output signals (retransmitting),
 - parameters of the communication interface.
- binary inputs to control the recording tape feed,
- possibility of archiving and converting measuring data in a computer through the RS-485 interface connection,
- universal power supply from the network or by d.c. voltage,
- □ housing protection degree from the frontal side: IP65,
- conformity to standard requirements concerning servicing safety and electromagnetic compatibility (CE mark).
- Dessibility to build in a power pack for measuring transducers or a power pack for the binary input control (after agreeing the execution with the manufacturer).

TECHNICAL DATA

Recording width	100 mm
Number of channels	1
Recording of the measuring signal	continuous
Writing elements:	
- measuring system	a blue felt-tip pen (for 1000 running m)
- printer	a blue felt-tip pen
 offset between felt-tip pens 	3 mm
Response time	≤2 s
Measurement, recording and output signal accuracy class	0.5
Recording support	paper recording tape
	roll or Z-fold tape -16 m, acc. to DIN 16230
Recording tape feed	0, 5, 10, 20, 60, 120, 300, 600, 1200 and 3600 mm/h
Printing of texts	for recording tape feed 5300 mm/h
Output signal:	
- current	05 mA, 020 mA or 420 mA
	load resistance < 250 Ω
- voltage	05 V, 15 V or 010 V load resistance > 500 Ω
Binary input	2, switching over of the tape feed: START/STOP and INT/EXT
- control signal	0 or 524 V/0.02 A

Measuring ranges

RECORDER DESIGN

The recorder housing is made of steel sheet and is closed from the front side by a transparent door with a lock (1).

Two catches (2) are placed on the housing walls to fix the recorder into the panel by means of assembly screw holders included in the delivered recorder accessory set. At the housing rear part a terminal plate (3) is placed.

A universal tape rewinder for the recording roll and Z-fold tape (4) has been applied in the recorder.

Above the rewinder there are the measuring system (5) and the printer (6). The keyboard with the LCD display and the supply switch (7) are accessible after removing the rewinder.

RECORDER DIMENSIONS

The recorder is fixed into the panel by means of two assembly screw holders included in the recorder accessory set, which are installed in the housing catches. The arrangement of catches on the four housing walls and the door design enable to assembly recorders in contiguity on the over-panel part.

¹⁾ Standard settings defined by the manufacturer are programmed in the recorder.

²⁾ The manufacturer establishes the code number.

³⁾ The KR7 recorder in the version without the printer is not serviced by the Lumel-Leonardo program.

NOTE:

One can build into the recorder a power pack for measuring transducers or to the binary output control. These options must be agreed with the manufacturer.
